

PRODUCT OVERVIEW

genX360 is a fully automated Generative AI decision-support platform for chemical and process manufacturing. It places a conversational assistant on your operating dashboards and inside Teams application, so engineers and operators get answers, reports and actions in the tools they already use. Ask a question in plain English and get an answer in seconds; live work items reach the right person for approval; and reporting, benchmarking and simulation runs are triggered by instruction alone. Pre-built modules for standard process units deploy on your choice of cloud, with enterprise-grade security.

One Assistant, Everywhere You Work

Shown: a report requested in chat, and a work item actioned in Teams.

TEAMS APPLICATION · GENX360 ASSISTANT

Hi, can you give me today's plant report?

Here is your PDF report with all the information.

Daily_Plant_Report.pdf
All units · generated 06:00

Send me this every morning at 6.

Scheduled — the daily report will reach you at 06:00.

Work item · Overhead fouling, Drum D1

PARAMETER	ACTUAL	OPTIMUM
Quench flow	32.2	35.3
Overhead temp	85.0	87.8

Approve Assign Snooze

Live in the Teams application
Work items arrive in the Teams application; users review, respond and act without leaving the chat.

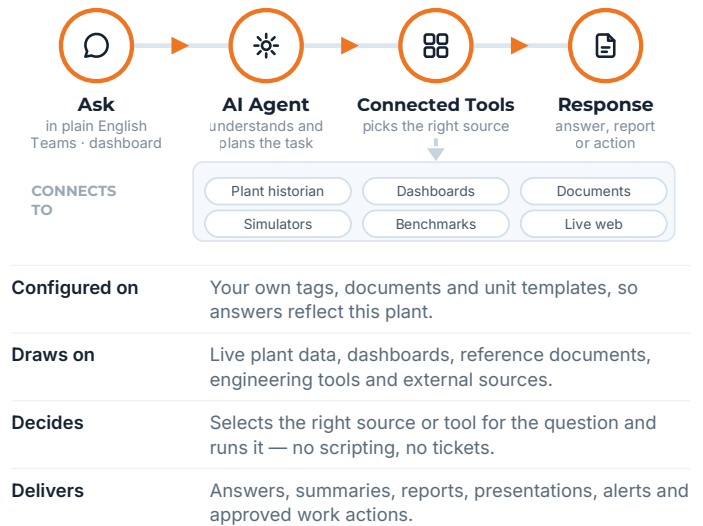

Ask in plain English
Any question about the process or the dashboard, answered in seconds.

Your channels
Teams, dashboard, email or mobile — flexible to integrate wherever teams work.

Nothing to learn
No new console and no training programme; it runs inside tools already in daily use.

How It Works

From a question in English to an answer and an action, in seconds.

What genX360 Does For You

Enabled to suit each site, each unit and each role.

Ask Anything
Tag checks through to full unit troubleshooting.

Scheduled Reports
Digests delivered to Teams, Outlook or any channel.

Run Simulations
Benchmarking tools launched by English instruction.

Live Web Lookup
Adds outside benchmarks and references on request.

Action Reminders
Chases every pending work item to closure.

One-Click Actions
An alert becomes a task with its likely cause.

Dashboard Summaries
A plain-English recap of any dashboard, on demand.

Anomaly Alerts
Flags pre-set process deviations as they occur.

Approvals in Chat
Respond and close out without leaving Teams.

Presentation Builder
PowerPoint decks built to your own format.

Shift Handover
A written summary compiled at every changeover.

Role-Based Views
Each team sets what it sees and when it is told.

Business Impact

What sites gain once genX360 is part of the daily routine.

10x Faster decisions
answers in seconds instead of manual data pulls

100% Workflow automation
work items raised, tracked and closed in Teams

24x7 Always-on watch
deviations flagged the moment they occur, on every shift

Basis: time saved on routine queries, report and presentation preparation, shift handovers, and follow-up on open work items.

Platform, Security and Fit

Enterprise security
Modern authentication and role-based access.

Deploy on any cloud
Runs on Azure, AWS, Google Cloud, Oracle, IBM Cloud, on-premise, etc.

Connects to your systems
Dashboards, historians, documents, tools.

Built for process units
Predictive maintenance, asset failure prediction, advanced refinery analytics, and much more.

Any AI platform
Configurable with Copilot Studio, Anthropic API, OpenAI API or open-source models run in-house and offline.
